Course Basic Information				
	Equal transf Circil Em	ain conin a		
Academic Unit:	Faculty of Civil Engineering			
Course title:	Strength of Materia	als I		
Level:	Bachelor			
Course Status:	Compulsory			
Year of Study:	2nd Year 3rd Sem	2nd Year 3rd Semester		
Number of Classes per Week:	3+2			
ECTS Credits:	9			
Time /Location:	According to the timetable			
Teacher:	Professor assistant Arton D.Dautaj			
Contact Details:	e-mail: arton.dautaj@	o Puni-pr.edu www.fn.ur	ni-pr.edu	
Course Description: Course Goals:	Strength of materials is a branch of applied mechanics that deals with the behaviour of solid bodies subjected to various types of loading. Furthermore, it studies deformations, strain and displacement of deformable bodies and their components. Understanding these sizes for different levels of forces provides a picture of the behaviour of these structures and a safe design of various structures such as: buildings, dams, bridges, ships, planes, etc. The bodies consider are subject to axial loads, torsion and bending. Other important issues that are addressed are: Stress and strain Transformation, Review of Centroids and Moments of Inertia, combined loading, design of beams and shafts, deflections of beams and shafts. Main aim of Strength of Materials I is determination stress and strain of beams, subjected to tension, compression, torsion, and bending assignment of shear and moment diagrams, determination of cross-sections of beams, and solving of statically indeterminate beams and shafts.			
Expected Learning Outcomes:	After completing this course, students will be able to determine the type and quality of material, the static scheme of the building structures, and what is most important the dimensions and shape of the cross-section of bearing elements of the structure so that the structure to be as rational and stable.			
Student Workload (should be in co	malianco with stude	t's Loornign Outcom	ocl	
Activity	Hours	Day/ Week	Total	
Lectures	3	15	45	
Theory/ Lab Work/Exercises	2	15	30	
Practical Work	2	15	30	
Preparation for intermediate exam	1	10	10	
Consultations with the teacher	1	15	15	

Course title: Strength of Materials I

Consultations with the teacher

Self-study (library or home)

Projects, presentations, etc.

Assessment time (test, quiz, final

Preparation for final exam

Field Work

Homework

exam)

Test, seminar paper

Total			225	
Teaching Methods:		Lectures, exercises during class using	g different materials, one	
-		project work in group of 2-3 stude	ents (independent work),	
		individual homework, laboratory works.		
Assessment Methods:		Limit course passing higher than 60%;		
		Student attendance 5%;		
		Individual assignments completed in cla	ss 5%;	
		Individual assignments completed at ho	me 5%;	
		Evaluation from the tests 35%;		
		Final Exam 60%

Week	Title of the Lecture Introduction, 1., Basic Assumptions and meanings. The Fundamental			
Week 1:		. The Fundamental		
		Equations of Deformable-Body Mechanics General Definitions and fundamentals of		
	calculation, Internal Forces[1,6]			
	Stress analysis: Concept of Stress, Normal, Shear and Bearing stress Under			
		ding.Example, Equality of Shear Stresses on Inclined Sections.	on perpendicular planes,	
Maak 2				
Week 2:	_	oncepts: Introduction, Allowable Stress D		
		SIGN (Load and Resistance Factor Design		
		nalysis, Displacement and deformation, s		
Week 3:		between displacement and deformation of		
Week J.		rain Relations, Mechanical properties of		
		sion test, Stress strain behaviour of due		
Week 4:		aw. Summary of Basic theory elasticity'	s equations [1].	
VVEEK 4.		rain Relations, Solutions for	angth of motorials Doltarmi	
		in the Linear Theory of Elasticity and stre	-	
		's equations. Semi invers method of Sa	ant venant, experimental	
Week 5:	method.		Definitions of section	
WEEK J.		Shear, axial and moment diagrams, Introduction, Definitions of section		
		ign Conventions, procedure to determine	e the diagrams and	
Week 6:		al equations. [1]	function control of continue	
Week 6:		ial and moment diagrams, Diagram and		
	torces, N	ethod to determine the section forces. [2	1]	

Week 7:	Axial Load, Determination of axial load, stress, strain, displacement of
	member loaded axially. Statically indeterminate members, thermal and
	assembly stress, Displacement-Method Solution of
	Axial-Deformation Problems, Force-Method Solution of Axial-
	Deformation Problems, Aplication of displacement Method to Analysis of Planar
	Trusses, Inelastic axial deformations [1,6]
Week 8:	Geometric properties of cross sections of a member, Centroids, Moments
	of inertia, Principal Moments of Inertia, the polar moment of inertia, radius
	and ellipse Inertia, composites area. [1]
Week 9:	Torsion, Torsional deformation of a Circular shaft, exact and simple
	solutions, Angle of twist, stress and shear strain. Torsion of non circular
	shafts [1,3,6]
Week 10:	Torsion, The Prandtl's Membrane Analogy to the Torsion Problem, Torsion of thin
	walled members with opened and closed cross sections. Statically Indeterminate
	Torque loaded Members, [1,3,6]
Week 11:	Bending, Bending with moment, Normal stress, shear stress, shear and
Week 11:	
Week 11:	Bending, Bending with moment, Normal stress, shear stress, shear and
Week 11: Week 12:	Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and
	Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3]
	 Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3] Stress transformations, The force equilibrium equations, Reciprocity shear
	 Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3] Stress transformations, The force equilibrium equations, Reciprocity shear force's law, Stresses on Inclined Sections, General Equations of Plane Stress
Week 12:	 Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3] Stress transformations, The force equilibrium equations, Reciprocity shear force's law, Stresses on Inclined Sections, General Equations of Plane Stress Transformation, Mohr's Circle-Plane stress. Principal stresses. [1,3,6]
Week 12:	 Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3] Stress transformations, The force equilibrium equations, Reciprocity shear force's law, Stresses on Inclined Sections, General Equations of Plane Stress Transformation, Mohr's Circle-Plane stress. Principal stresses. [1,3,6] Strain Transformations, Principal and volume strain, Plain strain, General
Week 12:	 Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3] Stress transformations, The force equilibrium equations, Reciprocity shear force's law, Stresses on Inclined Sections, General Equations of Plane Stress Transformation, Mohr's Circle-Plane stress. [1,3,6] Strain Transformations, Principal and volume strain, Plain strain, General Equations of Plane Strain, Mohr's Circle for Plane Strain Transformation, Strain Measurement and Strain Rosettes, Generalized Hooke's Law for Isotropic Materials [1,3,6] Bending, The elastic curve, Angle of rotation, The Differential Equation of
Week 12: Week 13: Week 14:	 Bending, Bending with moment, Normal stress, shear stress, shear and normal stress diagram for circular, prismatic, rectangular member, for I and C sections, Shear centre for open Thin walled Members. [1,3] Stress transformations, The force equilibrium equations, Reciprocity shear force's law, Stresses on Inclined Sections, General Equations of Plane Stress Transformation, Mohr's Circle-Plane stress. Principal stresses. [1,3,6] Strain Transformations, Principal and volume strain, Plain strain, General Equations of Plane Strain, Mohr's Circle for Plane Strain Transformation, Strain Measurement and Strain Rosettes, Generalized Hooke's Law for Isotropic Materials [1,3,6] Bending, The elastic curve, Angle of rotation, The Differential Equation of Elastic curve, Deflection by Integration, Mohr's Method.[1,3]

Academic Policies and Code of Conduct

We start and finish class on time.

Tools used during class must be cleaned and stored away at the end of class.

Mobile/smart phones, and other electronic devices (e.g. iPods) must be turned off (or on vibrate) and hidden from view during class time.

Laptop and tablet computers are allowed for quiet use only; other activities such as checking personal e-mail or browsing the Internet are prohibited.

Note | If a student has more than 3 class assignments evaluated below 50% he/she loses the right on taking the final exam. Evaluation is done from 0-100 %.
